

To whom it may concern,

It is my sincere pleasure to recommend 4D security as a trustworthy partner for your future projects. 4D have been a long standing partner for the foundation of the Abu Dhabi (AD) Critical Sites project. 4D have been working closely with AIS/ATS providing support with the design, deployment, implementation and the management of the project.

The Abu Dhabi Critical Sites project platform enables the security team real-time information about potential threats to their facilities. The Wisdom™ command and control platform from 4D lets operators to manage all of the pertinent domains from a single interface. The Wisdom software by 4D provides a combined access and perimeter security solution suitable for protecting critical infrastructure assets.

It would be my great pleasure to offer further details on the excellent support provided by 4D for the Abu Dhabi Critical Sites Project.

Yours Sincerely,

ATS General Manger
